CH 5

for earth gravity

center of mass = center of gravity

Centroid = center of Area

$$\bar{x} = \frac{\int x\,dm}{m} \quad / \quad \bar{y} = \frac{\int y\,dm}{m}$$

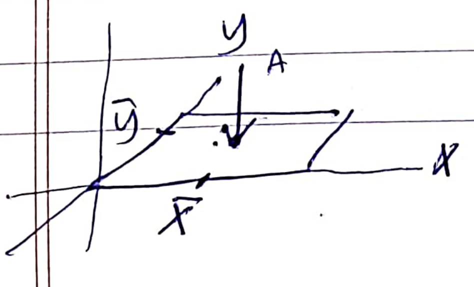
$$\bar{X} = \frac{\int X\,dA}{A} \quad / \quad \bar{y} = \frac{\int y\,dA}{A}$$ For 2d

$A\bar{x} = Q_y$ = first moment of Area with respect to y

$$A\bar{x} = Q_y = \int X\,dA$$

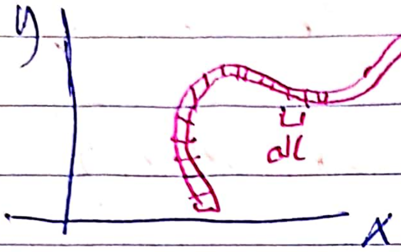
تاك بتوخد المومنت
حول y اذا ضرب القوه ب $\bar{x}$ لانه القوة
في المركز لكن بدل القوه ناخذ المساحه
لأنها moment of Area مش moment of force

$$Q_x = A\bar{y} = \int y\,dA$$ = first moment of Area with respect to X



$$Q_y = A\bar{x} = \int x\,dA$$
$$Q_x = A\bar{y} = \int y\,dA$$

For thin elements



$A =$ مساحة المقطع
$L =$ كل الطول
$dL =$ طول المقطع
$\rho =$ الكثافة

$$M_X = AL\rho g\,\bar{y} = \int y * A * \rho * g * dL$$

$$L\bar{y} = \int y\,dL$$

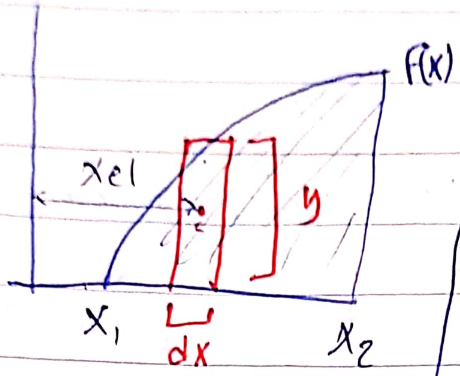
$$\boxed{\bar{y} = \frac{\int y\,dL}{L}}$$

$$\boxed{\bar{X} = \frac{\int X\,dL}{L}}$$

$\bar{X}L$ = first moment of length with respect to (y) Axis $= \int x\,dL$

the same for X-axis

Centroid by integration



$$\bar{x}A = \int x_{el}\, dA$$

$$\bar{x}A = \int x * y\, dx$$

$$\bar{x}A = \int_{x_1}^{x_2} x * f(x)\, dx$$

$$\bar{x} = \frac{\int_{x_1}^{x_2} x\, f(x)\, dx}{\int dA}$$

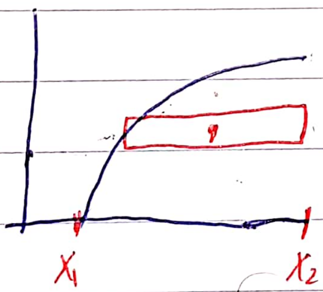
$$\bar{y}A = \int y_{el}\, dA$$

$$\bar{y}A = \int \frac{y}{2} * y * dx$$

$$\bar{y}\int dA = \int \frac{(f(x))^2}{2}\, dx$$

مهم جداً أنه تعرف عندما نأخذ شريحة عمودية على المحور فإنه السنترويد في منتصف المسافة على بعد $y/2$ مثلاً

ممكن أن شريحة عمودية أو موازية للمحور !! مش مشكلة

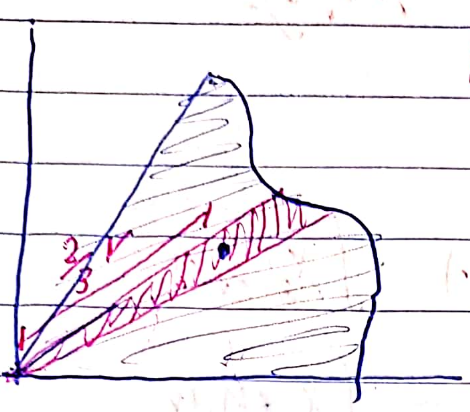


$$\bar{x}A = \int_{y_1}^{y_2} \frac{(x_2 + x)}{2} * (x_2 - x)\, dy$$

$$\bar{y}A = \int y\, (x_2 - x)\, dy$$

Polar coordinates

$r = \boxed{}\ \theta$



$\boxed{x_{el} = \frac{2}{3} r * \cos\theta}$

$\boxed{y_{el} = \frac{2}{3} r * \sin\theta}$

$\boxed{dA = \frac{1}{2} r^2 \sin d\theta}$

but $\sin d\theta = d\theta$

$\bar{X}A = \int x_{el}\, dA$

$= \int \frac{2}{3} r \cos\theta * \frac{1}{2} r^2 * . d\theta$

$$\boxed{\bar{X} = \frac{\int \frac{1}{3} r^3 \cos\theta\, d\theta}{A}}$$

عمل جيداً

$\bar{y}A = \int y_{el}\, dA$

$= \int \frac{2}{3} r \sin\theta * \frac{1}{2} r^2 d\theta$

$$\boxed{\bar{y} = \frac{\int \frac{1}{3} r^3 \sin\theta\, d\theta}{A}}$$

Horizontal

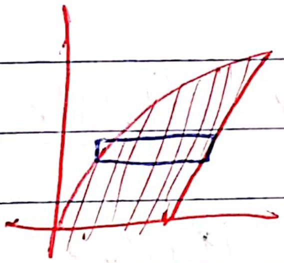
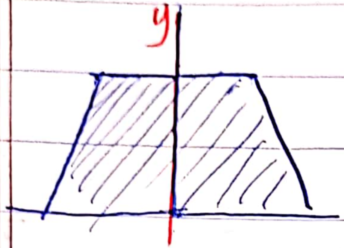
Vertical



in vertical it's hard because we'll need 2 integrals

Symetry

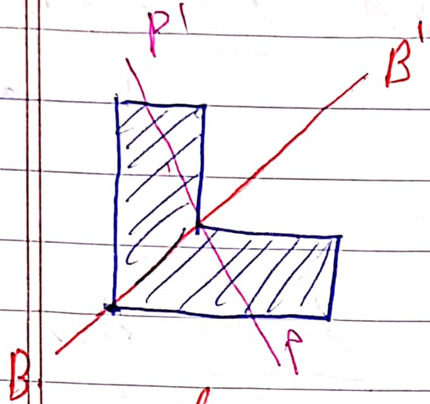


$Q_y = 0$

because the centroid is on y axis because of symetry

so the distance between centroid and axis = 0

$\bar{X}A = 0 * A = 0$



the same for $Q_{BB'} = \overline{PP}(A) = 0$

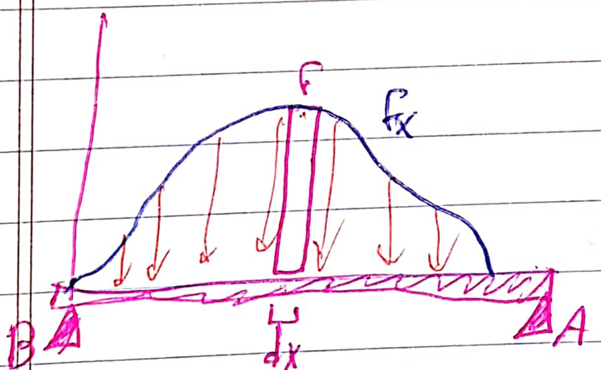
distributed force

$\boxed{N/m \times length = force}$

$\boxed{or \int load \times dx}$

to find moment or reactions
we need to find a single force
at the centroid of the shape
of distributed load

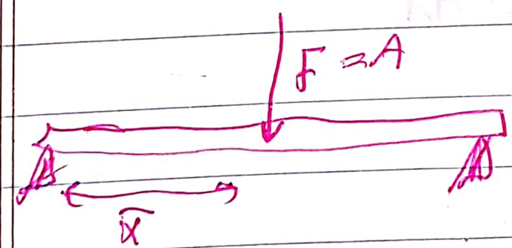


load $= \int dw$

$dw = F\,dx$

load $= \int F\,dx$ = Area

$= \int dA = A$



$A \times \bar{X} = \int x\,dA$

A_1 is symetric around two perPendicular axes

Axis 1 : $y = 75$ mm

Axis 2 : $x = 60$

so $C_1 = (60, 75)$

A_2 is a triangle

$A_1 = 2 * 60 * 75 = 9*10^3$ mm
