

Web Application and Technologies (COMP 334)
2nd Semester 2018/2019
Dr. Yousef Hassouneh

Dear Students

A CShost has been setup for you, and each one of you have been given a domain. The CShost will be used to host all of your course works: lab tasks, assignment, and projects.

Every one of you has an account, the server url is

<https://studentswebprojects.ritaj.ps:8000/login/>

Each student can login in using the following info:

username: wb{StudentID}

=> wb1110633 (replace 1110633 with your student ID)

password: web{StudentID}

=>web1110633

Each student must create his own subdomain and ftp user. Eng. Ala has prepared a Tutorial video to guide you in the process, so you can view it here:

<https://youtu.be/NHsgVf5eCRI>

Your home page, which is the index file, should consist the following information

The index page should have:

- your name, id, your program of study (i.e what are you studying), a nice photo for you, a little bit about yourself such as hobbies, awards, etc.
- Divide the page into three sections: lab work, assignments, and projects.
- Keep your index page updated by adding the links to your works
- In your *htdocs* directory on the CS web server, create subdirectories called *labs*, *assignments*, and *projects*, in which you will add all of your html files.
- Within each of the above subdirectories you need to create another called *images*, in which add all of your images/photos, and CSS in you place your styling files.
