

7.2

Natural logarithms

(4)

* The natural logarithm function $\ln x = \int_1^x \frac{1}{t} dt$, $x > 0$

- $\ln 1 = 0 = \int_1^1 \frac{1}{t} dt$

- $D = (0, \infty)$

- $R = (-\infty, \infty)$

- $\ln e = 1$ where $e \approx 2.718$ is just a number.

* If $y = \ln x = \int_1^x \frac{1}{t} dt$, $x > 0$, then $y' = \frac{dy}{dx} = \frac{1}{x}$

- If $y = \ln|u(x)| = \int_1^{|u(x)|} \frac{1}{t} dt$, then $y' = \frac{u'(x)}{u(x)}$, $u(x) \neq 0$ and differentiable

- If $y = \ln|x|$, $x \neq 0$, then $y' = \frac{dy}{dx} = \frac{1}{x}$

* If u is differentiable that is never zero, then

$$\int \frac{1}{u} du = \ln|u| + C$$

Th2 (Properties of the Natural logarithm)

For any positive numbers a and b :

STUDENTS-HUB.COM

① $\ln ab = \ln a + \ln b$

"Product Rule"

② $\ln \frac{a}{b} = \ln a - \ln b$

"Quotient Rule"

③ $\ln \frac{1}{b} = -\ln b$

"Reciprocal Rule"

④ $\ln b^r = r \ln b$

"Power Rule"

r is rational.

Example: Express $\ln \sqrt{13.5}$ in terms of $\ln 2$ and $\ln 3$ (5)

$$\begin{aligned}\ln \sqrt{13.5} &= \ln \left(\frac{27}{2}\right)^{\frac{1}{2}} = \frac{1}{2} \ln \left(\frac{27}{2}\right) = \frac{1}{2} [\ln 27 - \ln 2] \\ &= \frac{1}{2} [\ln 3^3 - \ln 2] = \frac{1}{2} [3 \ln 3 - \ln 2]\end{aligned}$$

* The integrals of $\tan x$, $\cot x$, $\sec x$, $\csc x$

$$\boxed{1} \int \tan x \, dx = \ln |\sec x| + C$$

$$\boxed{2} \int \cot x \, dx = \ln |\sin x| + C$$

$$\boxed{3} \int \sec x \, dx = \ln |\sec x + \tan x| + C$$

$$\boxed{4} \int \csc x \, dx = -\ln |\csc x + \cot x| + C$$

Remember:

$$\int \sec x \tan x \, dx = \sec x + C$$

$$\int \csc x \cot x \, dx = -\csc x + C$$

$$\int \sec^2 x \, dx = \tan x + C$$

$$\int \csc^2 x \, dx = -\cot x + C$$

Proof $\boxed{1}$ $\int \tan x \, dx = \int \frac{\sin x}{\cos x} \, dx = -\int \frac{du}{u}$ $u = \cos x > 0$ on $\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$
 $du = -\sin x \, dx$

$$= -\ln |u| + C = -\ln |\cos x| + C = \ln \frac{1}{|\cos x|} + C = \ln |\sec x| + C$$

$$\boxed{3} \int \sec x \, dx = \int \sec x \left(\frac{\sec x + \tan x}{\sec x + \tan x} \right) dx = \int \frac{\sec^2 x + \sec x \tan x}{\sec x + \tan x} dx$$

$$= \int \frac{du}{u} = \ln |u| + C$$

$$= \ln |\sec x + \tan x| + C$$

$$\begin{aligned}u &= \sec x + \tan x \\ du &= \sec x \tan x + \sec^2 x \, dx\end{aligned}$$

Example: Find $\boxed{1} \int_{-3}^{-2} \frac{dx}{x} = \ln |x| \Big|_{-3}^{-2} = \ln 2 - \ln 3 = \ln \frac{2}{3}$

$$\boxed{2} \int_0^{\frac{\pi}{2}} \tan \frac{x}{2} \, dx = 2 \ln |\sec \frac{x}{2}| \Big|_0^{\frac{\pi}{2}} = 2 \ln \frac{1}{\cos \frac{x}{2}} \Big|_0^{\frac{\pi}{2}}$$

$$= -2 \ln \cos \frac{x}{2} \Big|_0^{\frac{\pi}{2}} = -2 [\ln \cos \frac{\pi}{4} - \ln \cos 0]$$

$$= -2 [\ln \frac{1}{\sqrt{2}} - \ln 1] = +2 \ln \sqrt{2} = \ln 2$$

Example: Use logarithmic differentiation to find $\frac{dy}{dx}$ for

① $y = \sqrt{x(x+1)}$

⑥

$$\ln y = \ln \sqrt{x} \sqrt{x+1} = \ln \sqrt{x} + \ln \sqrt{x+1}$$

$$\ln y = \frac{1}{2} \ln x + \frac{1}{2} \ln (x+1)$$

$$\frac{y'}{y} = \frac{1}{2} \left[\frac{1}{x} + \frac{1}{x+1} \right] \Leftrightarrow y' = \frac{1}{2} y \left[\frac{1}{x} + \frac{1}{x+1} \right]$$
$$= \frac{1}{2} \sqrt{x(x+1)} \left[\frac{1}{x} + \frac{1}{x+1} \right]$$

② $y = t(t+1)(t+2)$

$$\ln y = \ln t + \ln(t+1) + \ln(t+2)$$

$$\frac{y'}{y} = \frac{1}{t} + \frac{1}{t+1} + \frac{1}{t+2}$$

$$y' = y \left[\frac{1}{t} + \frac{1}{t+1} + \frac{1}{t+2} \right]$$

$$y' = t(t+1)(t+2) \left[\frac{1}{t} + \frac{1}{t+1} + \frac{1}{t+2} \right]$$
