

Function Dependency: Relationship among the attributes.

FD :  $A \xrightarrow{\text{Determines}} B$

So we can uniquely determine B

Ex	Name	Roll	CGPA
	A	R <sub>1</sub>	7.6
	B	R <sub>2</sub>	5.5
	C	R <sub>3</sub>	9.2
	A	R <sub>4</sub>	9.1
	B	R <sub>5</sub>	8.7

What is the CGPA of A? We can't determine as 2A exist

What is the CGPA of R<sub>4</sub>  $\Rightarrow$  9.1

See Roll associated with CGPA

which mean  $\text{Roll} \xrightarrow{\text{determine}} \text{CGPA}$

FD  $\left\{ \begin{array}{l} R \rightarrow C \\ R \rightarrow N \end{array} \right.$  / Name

Ex Find FD for this table?

a <sub>3</sub>	b <sub>2</sub>	c <sub>2</sub>	d <sub>4</sub>

$A \rightarrow B$  Means

↳ instance of 'A' we will have a unique value of 'B'

a<sub>1</sub> → b<sub>2</sub> x  
a<sub>1</sub> → b<sub>1</sub> x
