Example: Find the area of the region in the 1st guadrant that is bounded(w)
above by
$$y = \sqrt{x}$$
 and below by the x-axis and the line $y=x-2$
 $\sqrt{x} = x-2$ $\Leftrightarrow x = x^2 - yx + y \Leftrightarrow x^2 - 5x + y = 0$
 $\sqrt{x} = x-2$ $\Leftrightarrow (x - y)(x - 1) = 0 \Leftrightarrow (x = y) = 2$
 $\sqrt{x} = x - 2$
The total area = $A_1 + A_2$
 $= \int_{0}^{2} \sqrt{x} dx + \int_{0}^{2} (\sqrt{x} - x + 2) dx$
 $= \frac{2}{3} x^2 \int_{0}^{2} + \left[\frac{2}{3} x^2 - \frac{x^2}{2} + 2x\right]_{2}^{2} = \frac{10}{3}$
Example: Find the area of the region in Example by integrating w.r.t. y.
 $A = \int_{0}^{2} (y + 2 - y^2) dy$
 $= \frac{4}{2} + 2y - \frac{y^3}{3} \int_{0}^{2}$
 $= 2 + y - \frac{8}{3} = 6 - \frac{8}{3} = \frac{10}{3}$
 $(y - 2)(y + 1) = 0 \Leftrightarrow$
