

## 5.2 Sigma Notation and Limits of Finite Sums

(95)

Finite Sum:

Sigma "Sum"

$$\sum_{k=1}^n a_k = a_1 + a_2 + a_3 + \dots + a_{n-1} + a_n.$$

↑ The index k starts at k=1  
is the formula for the  $k^{\text{th}}$  term.

↑ The index k ends at k=n

Example ①  $\sum_{k=1}^4 k = 1 + 2 + 3 + 4 = 10$

② Write  $\sum_{k=0}^2 \frac{6k}{k+1}$  without sigma notation

$$\sum_{k=0}^2 \frac{6k}{k+1} = 0 + \frac{6}{2} + \frac{12}{3} = 3 + 4 = 7$$

③  $\sum_{k=1}^2 (-1)^{k+1} \sin \frac{\pi}{k} = \sin \pi - \sin \frac{\pi}{2} = 0 - 1 = -1$

Example: Express the sum  $\frac{2}{3} + \frac{4}{3} + \frac{6}{3} + \frac{8}{3} + \frac{10}{3}$  in sigma notation

$$\frac{1}{3} [2 + 4 + 6 + 8 + 10] = \frac{1}{3} \sum_{k=1}^5 2k$$

Algebra Rules for Finite Sums:

1) Sum Rule: STUDENTS-HUB.com

$$\sum_{k=1}^n (a_k + b_k) = \sum_{k=1}^n a_k + \sum_{k=1}^n b_k$$

Uploaded By: Malak Obaid

2) Difference Rule:

$$\sum_{k=1}^n (a_k - b_k) = \sum_{k=1}^n a_k - \sum_{k=1}^n b_k$$

3) Constant Multiple Rule:

$$\sum_{k=1}^n c a_k = c \sum_{k=1}^n a_k$$

4) Constant Value Rule:

$$\sum_{k=1}^n c = nc$$

$$\boxed{5} \quad \sum_{k=1}^n k = \frac{n(n+1)}{2}$$

(96)

$$\boxed{6} \quad \sum_{k=1}^n k^2 = \frac{n(n+1)(2n+1)}{6}$$

$$\boxed{7} \quad \sum_{k=1}^n k^3 = \left( \frac{n(n+1)}{2} \right)^2$$

Example: Evaluate:

$$\textcircled{1} \quad \sum_{k=1}^7 (-2k) = -2 \sum_{k=1}^7 k = -2 \cdot \frac{7(7+1)}{2} = -7(8) = -56$$

$$\textcircled{2} \quad \sum_{k=1}^6 (3 - k^2) = \sum_{k=1}^6 3 - \sum_{k=1}^6 k^2 = (6)(3) - \frac{6(7)(13)}{6} = 18 - 91 = -73$$

### Riemann Sums

\* Consider a bounded function  $f$  defined on  $[a, b]$

\* Divide  $[a, b]$  into  $n$  closed subintervals by choosing  $n-1$  points

$\{x_1, x_2, \dots, x_{n-1}\}$  between  $a$  and  $b$ .

$$a = x_0 < x_1 < x_2 < \dots < x_{n-1} < x_n = b$$

\* The set  $P = \{x_0, x_1, \dots, x_{n-1}, x_n\}$  is called a partition of  $[a, b]$ .

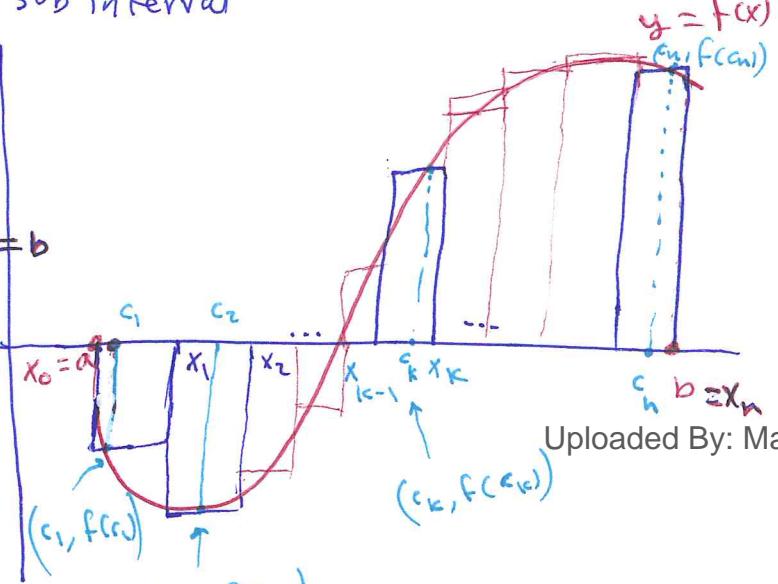

\* The partition  $P$  divides  $[a, b]$  into  $n$  closed subintervals:

$$[x_0, x_1], [x_1, x_2], \dots, \underline{[x_{k-1}, x_k]}, \dots, [x_{n-1}, x_n]$$

$\underset{k^{\text{th}} \text{ subinterval}}{\phantom{[x_{k-1}, x_k]}}$

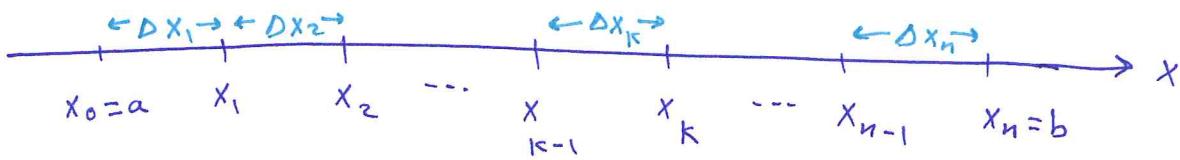

\*  $\Delta x_k = x_k - x_{k-1}$  is the width of the  $k^{\text{th}}$  subinterval.

\*  $\max |\Delta x_k|$  is the norm of the partition  $P$  denoted by  $\|P\|$ .

Uploaded By: Malak Obaid

\* If all subintervals have equal width, then the width  $\Delta x$  of any subinterval is  $\Delta x = \frac{b-a}{n}$

\* Select a point  $c_k$  in  $\Delta x_k$  for all  $k=1, 2, \dots, n$

\* On each subinterval we find  $f(c_k) \Delta x_k$ . This product is

- positive when  $f(c_k)$  is positive. This gives area above  $x$
- negative when  $f(c_k)$  is negative. This gives area below  $x$

\* The Riemann sum  $S_p$  for  $f$  on the interval  $[a, b]$  is

$$S_p = \sum_{k=1}^n f(c_k) \Delta x_k.$$

\* If we choose  $n$  subintervals all having equal width,  $\Delta x = \frac{b-a}{n}$ , and we choose the point  $c_k$  to be the right hand endpoint of each subinterval, Then Riemann Sum formula becomes  $S_n = \sum_{k=1}^n f\left(a + k \frac{b-a}{n}\right) \left(\frac{b-a}{n}\right)$

Example Let  $f(x) = 1 - x^2$  on  $[0, 1]$

STUDENTS-HUB.com Uploaded By: Malak Obaid  
 Find formula for the Riemann sum by dividing  $[0, 1]$  into  $n$  equal subintervals and using  $c_k$  to be the right hand endpoint.  $a=0, b=1$

$$\Delta x_k = \frac{1-0}{n} = \frac{1}{n} \quad \text{the width of the } k^{\text{th}} \text{ subinterval } k=1, 2, \dots, n$$

$$\begin{aligned} S_n &= \sum_{k=1}^n f\left(\frac{k}{n}\right) \frac{1}{n} = \sum_{k=1}^n \left[1 - \left(\frac{k}{n}\right)^2\right] \frac{1}{n} = \sum_{k=1}^n \frac{1}{n} - \sum_{k=1}^n \frac{k^2}{n^3} \\ &= \frac{n}{n} - \frac{1}{n^3} \sum_{k=1}^n k^2 = 1 - \frac{1}{n^3} \frac{n(n+1)(2n+1)}{6}. \end{aligned}$$

$$S_n = 1 - \frac{2n^3 + 3n^2 + n}{6n^3} = 1 - \left[ \frac{1}{3} + \frac{1}{2n} + \frac{1}{6n^2} \right]$$

(98)

$$S_n = \frac{2}{3} - \frac{1}{2n} - \frac{1}{6n^2}$$

[b] calculate the area under the curve over  $[0, 1]$   
 "Take limit for  $S_n$  as  $n \rightarrow \infty$ "

$$\lim_{n \rightarrow \infty} S_n = \boxed{\frac{2}{3}}$$

[c] Find  $\int_0^1 (1-x^2) dx = x - \frac{x^3}{3} \Big|_0^1 = 1 - \frac{1}{3} = \boxed{\frac{2}{3}}$

---

Example: Find the norm of the partition

$$P = \{0, 1.2, 1.5, 2.3, 2.6, 3\}$$

The subintervals are:  $[0, 1.2], [1.2, 1.5], [1.5, 2.3], [2.3, 2.6], [2.6, 3]$   
 $\Delta x_1 = 1.2 \quad \Delta x_2 = 0.3 \quad \Delta x_3 = 0.8 \quad \Delta x_4 = 0.3 \quad \Delta x_5 = 0.4$

The norm of the partition P is  $\|P\| = 1.2$
