## 6.4 Area of surfaces of Revolution

Note Title

77/11/77

**DEFINITION** If the function  $f(x) \ge 0$  is continuously differentiable on [a, b], the **area of the surface** generated by revolving the graph of y = f(x) about the x-axis is

$$S = \int_{a}^{b} 2\pi y \sqrt{1 + \left(\frac{dy}{dx}\right)^2} dx = \int_{a}^{b} 2\pi f(x) \sqrt{1 + (f'(x))^2} dx.$$
 (3)

## Surface Area for Revolution About the y-Axis

If  $x = g(y) \ge 0$  is continuously differentiable on [c, d], the area of the surface generated by revolving the graph of x = g(y) about the y-axis is

$$S = \int_{c}^{d} 2\pi x \sqrt{1 + \left(\frac{dx}{dy}\right)^{2}} \, dy = \int_{c}^{d} 2\pi g(y) \sqrt{1 + (g'(y))^{2}} \, dy. \tag{4}$$

**EXAMPLE 1** Find the area of the surface generated by revolving the curve  $y = 2\sqrt{x}$ , —

 $1 \le x \le 2$ , about the x-axis

Sol: 
$$f(x) = 2\sqrt{x} \Rightarrow \hat{f} = \frac{1}{\sqrt{x}}$$
 Which is cont. on
$$[1,2] \cdot \text{Moreover} \quad f(x) \Rightarrow 0 \quad \forall \quad x \in [1,2] \cdot S_0,$$

$$S = 2\pi \int f(x) \int 1 + (f')^2 dx = 2\pi \int 2\sqrt{x} \int 1 + \frac{1}{x} dx$$

$$= 4\pi \int \sqrt{x+1} dx = 4\pi \frac{2}{3} (x+1)^2 \int \frac{8\pi}{3} (3\sqrt{3} - 2\sqrt{2}).$$

Find its lateral surface area (which excludes the base area). Clearly x = f(y) = 1 - y > 0 on [0,1]. Moreover  $\frac{dx}{dy} = -1$  is cont. on [0,1]. So the surface area of the cone is  $S = 2\pi \int f(y) \int (1+f(y)^2) dy = 2\pi \int (1-y) \int (1+(-1)^2) dy$  $=2\sqrt{2}\pi\left(9-\frac{9^2}{2}\right)=\sqrt{2}\pi\left(9-\frac{9^2}{2}\right)$ (کر حرکه (کنالیم توخع الحبے (کدرانی مص) (کذی نتج کم دررا به (کعقاعة (کستفیم و- ۱ = × ) (۱۰۱۱ عول دور لا ،
