CEN/TC EN 13940-2: Clinical Process & workflow

- EN 13940-2 describes the following types of processes:
 - Healthcare Process (Core clinical process)
 - Consists of clinical, resource management, and clinical management processes.
 - Healthcare Provider Research Process
 - Improving clinical knowledge of healthcare professionals
 - Healthcare Provider Educational Process:
 - Improving skills of healthcare professionals
 - Enabling healthcare professionals to learn the practical implementation of the clinical knowledge related to patient's care
 - Healthcare Administrative Process
 - Used to **control and support** the healthcare process

CEN/TC EN 13940-2: Clinical Process & workflow

Healthcare Process workflow

- A clinical process is started through a demand of care and go through the following steps:
 - Initial contact of the patient
 - The first encounter for health issue showing the process for demand of care

Change of Health Conditions

- The activities that contribute to any change in health condition of the patient.
- Program of Care
 - Healthcare **workflow** with healthcare resources for multiple health issues and health issue threads.
- Healthcare activities
 - Decision, diagnostic activities, plans, etc., and their relationship with other objects such as, *mandate, health condition*, etc.

to achieve continuity of care. Continuity perability is a basic requirement for content and context of the healthcare

types of processes reflect the s provides continuity from the subject of ber of basic premises for management,

s based upon the clinical perspective ptive terms regarding all types of tional Standard will establish a common

eptual basis for content and context in althcare organizations and for

ses as the focus, enabling the use of nowledge management. The core business in healthcare is the interaction between subjects of care and healthcare professionals, such interactions occur in healthcare and clinical processes and are the justification for the process approach of this International Standard. To be able to represent both clinical content and clinical context, this international Standard is based upon the clinical perspective and has focus upon the clinical process as a main concept for achieving continuity of care Uploaded By: Jibreel Bornat

EHR Information Model Standards

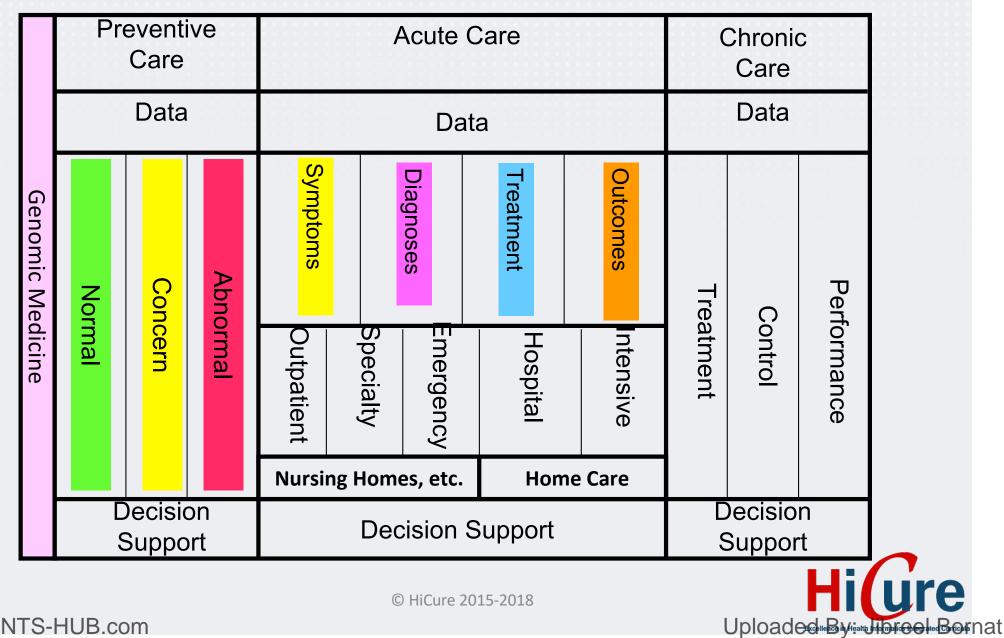

© HiCure 2015-2018

EHR Key Aims

- To create a shared EHR that provides a **central point** of shared health data
- To support the process of **continuity of care**
- To support a longitudinal patient record
- To support a real world health **environment**
- To provide targeted **decision** support
- To support the functions of **clinical research** to improving medical knowledge

A view of the healthcare world

Clinical Information Models: aims

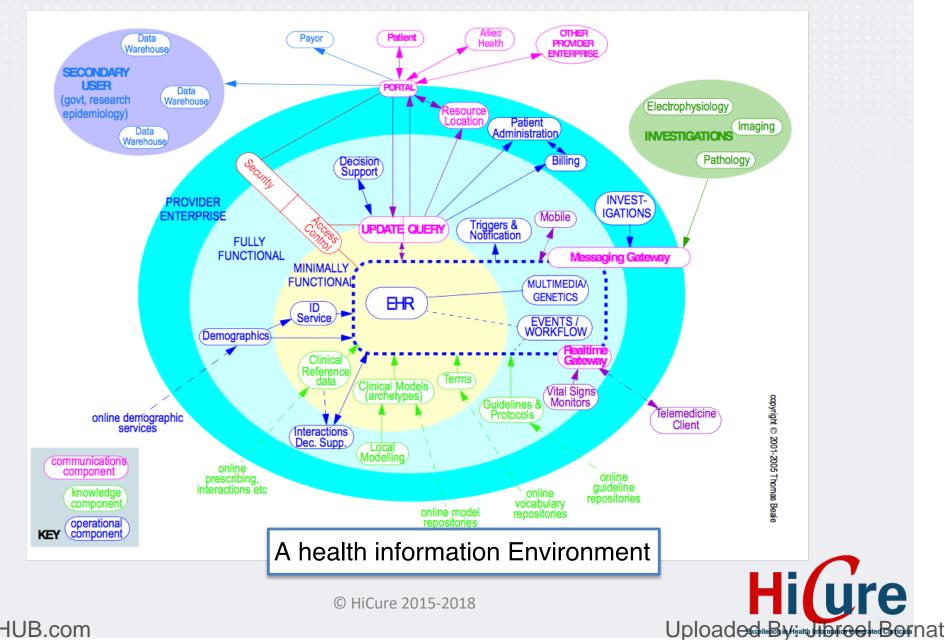

- Formally models clinical domain concepts
 - e.g. "smoking history", "discharge summary"
- Encapsulate evidence and professional consensus on how clinical data should be represented
 - published and shared within a clinical community, or globally
 - imported by vendors into EHR system data dictionaries
- Support **consistent** data capture, adherence to guidelines
- Enable use of **longitudinal** EHRs for individuals and populations
- Define a systematic EHR target for **queries**: for decision support and for research
