

## 3.8 Related Rates Equations

70  
 $\uparrow = +$ ,  $\downarrow = -$

Suppose we are pumping air into a spherical balloon:

The Volume ( $V$ ) and radius ( $r$ ) increase over time  $t$ :

$$V = \frac{4}{3} \pi r^3 \quad \frac{dV}{dt} = \frac{dV}{dr} \frac{dr}{dt} \quad (\text{chain Rule})$$

$$\frac{dV}{dt} = 4\pi r^2 \frac{dr}{dt}$$

If we know  $r$  and  $\frac{dV}{dt}$ , then we can find  $\frac{dr}{dt}$   $\approx$  how fast the radius increases over time

Example 1 Water runs into a conical tank at the rate  $9 \text{ m}^3/\text{min}$ .

The tank stands point down and has a height  $10 \text{ m}$  and base radius  $5 \text{ m}$ . How fast is the water level rising when the water is  $6 \text{ m}$  deep?

The variables are:  $V, x, y$  For red with

relation:  $V = \frac{1}{3} \pi x^2 y$

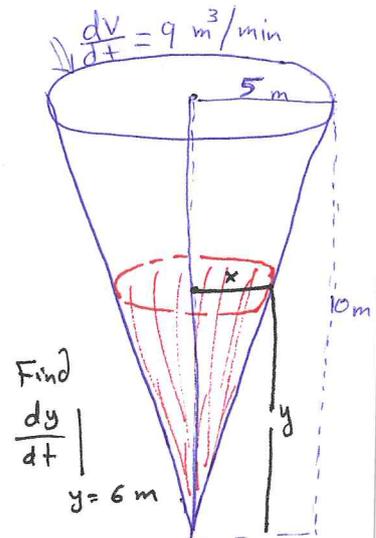

We must eliminate  $x$  because  $\uparrow$  we have no information about  $x$  and  $\frac{dx}{dt}$ . Similar triangles  $\Rightarrow$

$$\frac{x}{y} = \frac{5}{10} \Leftrightarrow \boxed{x = \frac{y}{2}}$$

$$\Rightarrow V = \frac{1}{3} \pi \left(\frac{y}{2}\right)^2 y = \frac{\pi}{12} y^3$$

$$\frac{dV}{dt} = \frac{\pi}{4} y^2 \frac{dy}{dt} \Leftrightarrow 9 = \frac{\pi}{4} (6)^2 \frac{dy}{dt}$$

$$\Leftrightarrow \frac{dy}{dt} = \frac{1}{\pi} \approx 0.32 \text{ m/min (the level is rising)}$$

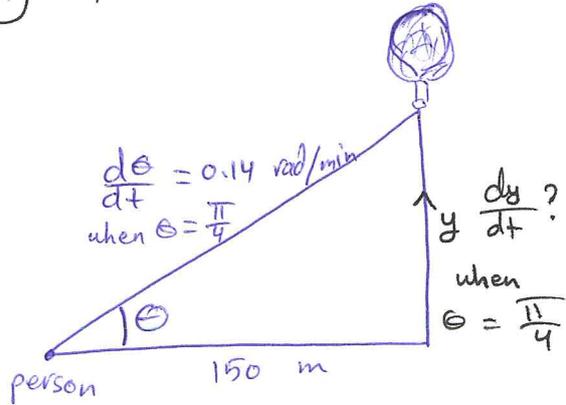

Example (2) A balloon rising straight up from a level field that is tracked by a person whose is 150 m from the lift-off point. At the moment the person's elevation angle is  $\frac{\pi}{4}$ , the angle is increasing at rate of 0.14 rad/min. How fast is the balloon rising at that moment?

The variables are  $\theta$  and  $y$  with

relation  $\tan \theta = \frac{y}{150}$

$y = 150 \tan \theta$

$$\frac{dy}{dt} = 150 \sec^2 \theta \frac{d\theta}{dt}$$

$$= 150 (\sqrt{2})^2 (0.14) \quad \theta = \frac{\pi}{4}$$

= 42 m/min "the balloon is rising"

page 158

Example (3) A police car, approaching a right-angled intersection from the north, is chasing a speeding car moving straight east. when the police is 1 km north of the intersection and the car is 1.3 km to the east, the police determine, using the radar, that the distance between them is increasing at rate 32 km/hr. If the police is moving at 100 km/hr at the instance of measurement, what is the speed of the car?

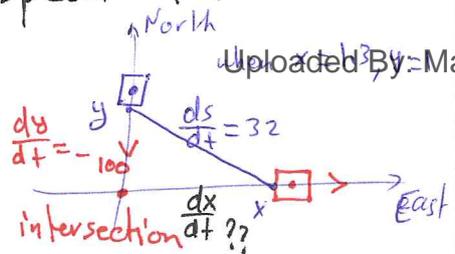

STUDENTS-HUB.com

The variables are  $x, y, s$  and related by  $s^2 = x^2 + y^2$

$$2s \frac{ds}{dt} = 2x \frac{dx}{dt} + 2y \frac{dy}{dt}$$

$$\sqrt{x^2 + y^2} \frac{ds}{dt} = x \frac{dx}{dt} + y \frac{dy}{dt}$$

Uploaded By: Malak Obaid

$$\Leftrightarrow \sqrt{(1.3)^2 + (1)^2} (32) = (1.3) \frac{dx}{dt} + (1)(-100)$$

$$\Leftrightarrow \frac{dx}{dt} = 117.3 \text{ km/hr}$$

car's speed.
