

12.1 Lecture Problems

13 Give geometric description of set of points/satisfy $x^2 + y^2 = 4$, $z = y$

$x^2 + y^2 = 4$ is cylinder

$z = y$ is plane

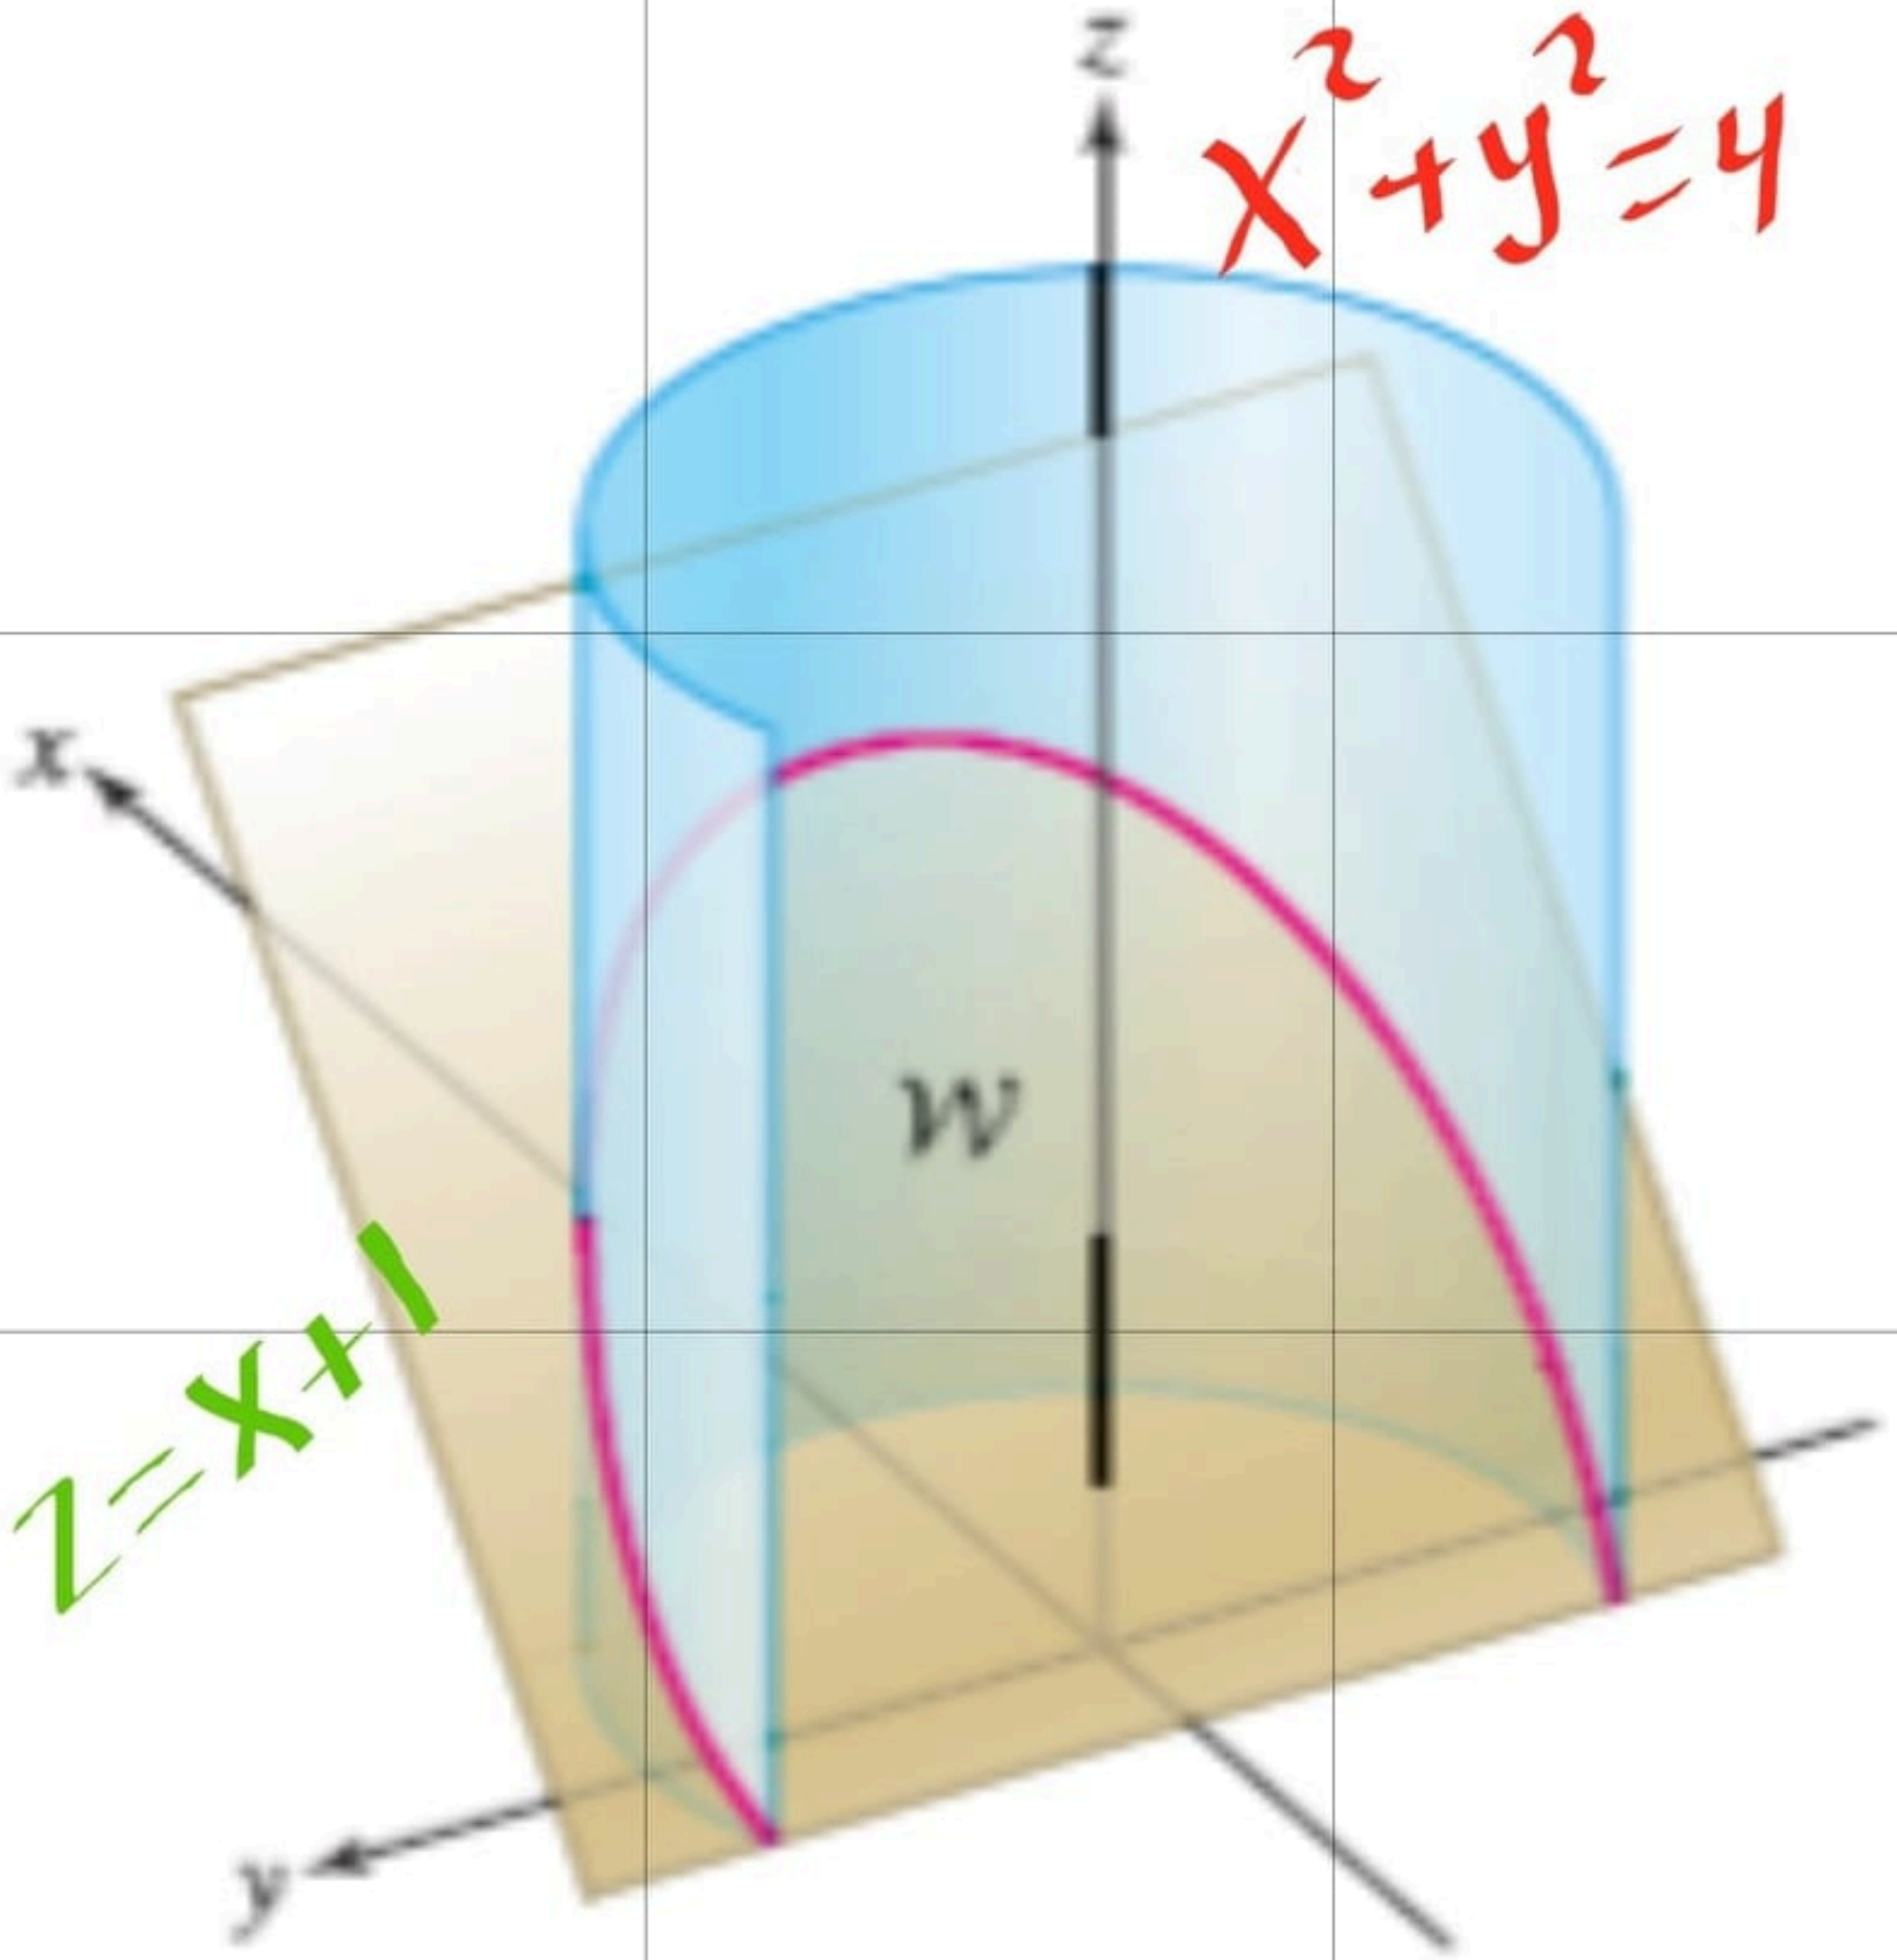

> intersection is ellipse

32 The set of points in space equidistant from the origin and the point $(0, 2, 0)$ are points (x, y, z) s.t

$$\sqrt{(x-0)^2 + (y-0)^2 + (z-0)^2} = \sqrt{(x-0)^2 + (y-2)^2 + (z-0)^2}$$
$$\cancel{x^2} + \cancel{y^2} + \cancel{z^2} = \cancel{x^2} + (y-2)^2 + \cancel{z^2}$$

$$\cancel{y^2} = \cancel{y^2} - 4y + 4 \Leftrightarrow \cancel{4y} = 4$$

$$\Leftrightarrow y = 1$$

$$x^2 + y^2 = 4$$

$$z = x + 1$$

w

34 The set of points in space that lie 2 units from the point $(0, 0, 1)$ and, at same time, 2 units from the point $(0, 0, -1)$

$$\sqrt{(x-0)^2 + (y-0)^2 + (z-1)^2} = 2 \quad \text{---} \rightarrow \textcircled{A}$$

and

$$\sqrt{(x-0)^2 + (y-0)^2 + (z+1)^2} = 2 \quad \text{---} \rightarrow \textcircled{B}$$

$$\cancel{x^2} + \cancel{y^2} + (z-1)^2 = \cancel{x^2} + \cancel{y^2} + (z+1)^2$$

$$\cancel{z^2} - \cancel{2z} + \cancel{1} = \cancel{z^2} + \cancel{2z} + \cancel{1}$$

$$-2z = 2z \Rightarrow 4z = 0 \Rightarrow \textcircled{z=0}$$

A) and B) become:

$$x^2 + y^2 + 1 = 4$$

$$x^2 + y^2 = 3$$
